

Linda had been living with a broken bone in her neck for ten years, due to a bad auto accident in 2000. She suffered from migraines, dizziness, stiffness in her neck and shoulders, vomiting, vertigo, and memory loss. The daily pain that Linda was living with was so severe it was impacting her life. She had been to many specialists, taken many different pain medications, been to physical therapy and a head and neck pain clinic, had tried rehab and full spine chiropractors, but nothing was relieving Linda's pain. Then one day, Linda's husband told her about a chiropractor he'd heard about, and that he used a different approach than the other chiropractors she'd been to in the past. Linda had no faith or hope that a chiropractor would be able to help her, since none were able to in the past. But Linda and her husband decided to give Upper Cervical Chiropractic a try. Linda was impressed with how personable Dr. Perkins was and how knowledgeable, patient, and gentle he was. Dr. Perkins wasn't bending or yanking on Linda, and she really appreciated that.

After continuing her care with Dr. Perkins, Linda's migraines have dissipated and have almost stopped altogether! Her dizziness is gone as well. Linda feels almost as good as she was before the 10 years of suffering following her auto accident! Linda states, "Dr. Perkins has given me my life back – THANK YOU DOCTOR!!" She recommends everyone go see Dr. Perkins – he will fix you up! Linda states, "There is no reason to suffer, even if you have to drive a while to get to his office, GET THERE! He isn't a chiropractor, he's so much more!"
